

Boston Centerless Achieves AS9100 Certification

September 2, 2009: Boston Centerless has achieved AS9100B Certification confirming that its quality management system adheres to the stringent standards recognized internationally by the aerospace and defense industry.

“By achieving this certification, Boston Centerless has legitimized its proficiency in carrying out the necessary requirements and standards involved with the aerospace industry”, says Steven Tamasi, CEO. “Quality has always been the cornerstone of our business, and we welcome the opportunity to demonstrate this through achievements such as AS9100.”

Intertek Testing Services, NA, Inc. granted the certification to Boston Centerless after an intensive audit of its Quality Management System. AS9100 is the International Quality Management System Standard for suppliers to Aviation, Space and Defense industries. AS9100 encompasses all the requirements of ISO 9001 along with additional requirements for these industries. Boston Centerless has been ISO 9001:2000 certified since 2001.

Boston Centerless is a leading industry supplier of precision ground bar materials to a variety of industries including aerospace and defense. The company also provides grinding services and manufactures a line of gage pins. For more information, visit www.bostoncenterless.com.
